

# SR 4650 Perennial Ryegrass

- Early development of spreading rhizomes
- Excellent seedling & mature plant salt tolerance
- Disease resistance results in fewer fungicide applications
- High levels of viable endophyte for insect control & stress tolerance
- Highest gray leaf spot resistance

SR 4650 perennial ryegrass (*Lolium perenne*) is an attractive, leafy, endophyte-enhanced ryegrass that has the highest level of gray leaf spot resistance of any perennial ryegrass. It has demonstrated high overall performance under various maintenance levels ranging from golf course fairways to residential lawns. Early development of spreading rhizomes gives this variety increased density when used for permanent turf, along with improved wear tolerance and recovery.

**USES:** Lawns, athletic fields, golf course, all general use. Excellent when used in mixes. Ideal in sun and tolerates partial shade.

**IDENTIFICATION:** A fast growing bunch type grass that spreads by tillers (stems). Leaves are dark green and glossy on the underside, tapered, pointed with a folded vernation (stem). Varieties available both as annuals, intermediates and perennials.

**ESTABLISHMENT:** Germinates and establishes very quickly. Fills by tillers. Popular over-seeder because of quick germ.

**S**preading **T**echnology - Many perennial ryegrass products in our portfolio benefit from spreading technology, featuring early development of aggressively spreading rhizomes and rapid tillering. These spreading traits boast improved wear tolerance and recovery plus excellent density and persistence.
