

# Purple Top Turnips

Purple Top Turnips grow very fast, reaching near maximum production levels in 70 to 90 days. They provide an excellent source of fall grazing for livestock and wildlife species. Turnips can be grazed during the normal growing season as well as late fall. Crude protein up to 24% can be produced in the leaves, and 15% in the roots.

## PLANTING INFORMATION

Planting Rate:	April-August (April-June; Mid July-August)
Planting Depth:	1/4-1/2 inch
Approximate Seeds per Pound:	220,000
Planting Rate in Pure Stand:	2-5 pounds per acre
Planting Rate in Mixture:	1-2 pounds per acre
Fertilizer:	Apply 50 pounds N at seeding; P & K according to soil test
pH:	Minimum 5.5
