PREMIUM
COVER CROP SEED

- Ideal for acres going to corn or other grass crops
- Research shows positive results in V3-V6 corn inter-seeding
- Low seeding rates work well in aerial cover crop seedings & where application options are limited
- Simple cover crop seed mix to use on acres where excess moisture can be an issue, or prevent plant acres, etc.

Soil First[®] 142 Classic cover crop mix is a simple combination for early planting windows - double-crop, prevent plant, interseeding too.

¹ Net Energy for Lactation = Energy available after subtracting digestive and metabolic losses
² Acid Detergent Fiber = Low values mean more digestible
³ Neutral Detergent Fiber = Low values mean cows can eat more

CONSIDERATIONS

When seeded early in summer/fall, consider additional grasses to help compete with the quick radish growth. Heavy crimson clover may invite voles.
