

Native Seed Mixes and Custom Blends

CONSERVATION RESERVE PROGRAM (CRP)

DID YOU KNOW?

Each CRP conservation practice, e.g. CP2, CP21, CP23A, CP25, CP42, has a different set of specifications that the seed mix must meet. Standards differ between states and counties.

These standards determine things such as:

- Seeds per square foot
- Number of species
- Proportion of grasses and flowers.

The seed mix information provided with your contract is an example. There are many ways to design your mix to meet the requirements of the CRP program.

We can help determine which native seed mix will work best for your CRP planting.

YOUR LAND IS ENROLLED IN CRP. NOW WHAT?

The Conservation Reserve Program (CRP) pays a yearly rental payment in exchange for farmers removing environmentally sensitive land from agricultural production and planting species that will improve environmental quality.

STEP 1: CONSIDER YOUR CRP GOALS

Determine why you're planting native species and the purpose you want your native restoration to serve.

STEP 2: CHOOSE YOUR CRP MIX

Consider a Pre-designed CRP Mix

Our pre-designed CRP mixes meet the requirements of your state's CRP program.

OR

Consider a Custom CRP Mix

Bring the mix specifications provided by your NRCS office or simply tell us what you're looking for.

We'll make recommendations based on species availability & price.

STEP 3: SEEK APPROVAL FOR THE FINAL MIX

We design all of our mixes to meet the requirements of the CRP program. However, we have found that the state-determined rules are often interpreted differently in each county. We recommend seeking approval from your local NRCS office for your mix prior to placing an order.

STEP 4: PLACE YOUR ORDER

Contact us at 800.356.SEED or info@laxseed.com and we will connect you with a Natives First™ dealer in your area.

STEP 5: ASK US ABOUT OUR PREFERRED INSTALLERS

If you're looking for a professional to plant your CRP mix, we can make recommendations for installers in your area.
