

FORAGE FIRST®

Ginger Kentucky Bluegrass

- Excellent emergence and seedling vigor
- Early maturity

- Aggressive rhizomes for outstanding coverage

Kentucky Bluegrass is long-lived, with underground rhizomes, resulting in dense sod. It is a highly palatable pasture grass. Ginger has excellent early spring greenup and forage production – almost a month earlier than many other bluegrass varieties. It is tolerant of close grazing, and is palatable and nutritious for all livestock – horses included.

SEEDING RATES (LBS/ACRE)

MONOCULTURE
MIX COMPONENT

10 - 15
3 - 10

SEED INFORMATION

SEEDS/LB **2,177,000**
DEPTH (IN) **1/4**
EMERGENCE (DAYS) **14 - 28**

CHARACTERISTICS

ESTABLISHMENT	SLOW	PALATABILITY	HIGH
PERSISTENCE	HIGH	YIELD POTENTIAL	MED
DROUGHT TOLERANCE	MED	GRAZING TOLERANCE	HIGH
WINTER HARDINESS	HIGH		

PLANTING TIMES

SPRING PLANTING	MAR - MAY	LIFE CYCLE	PERENNIAL
FALL PLANTING	AUG - SEP		

HARVEST MANAGEMENT

Cut boot to mid-bloom.

High stocking rates in spring take advantage of its early production. Because of its shorter stature, bluegrass is perfectly suited for grazing & tolerates close (or over) grazing.
