

# Flagstick Creeping Bentgrass

- Reduced inputs of fungicides, herbicides & fertilizers
- Superior turf quality in all environments
- Excellent for greens, tees or fairways
- Less *Poa annua* invasion for more uniform turf

[CLICK HERE FOR TECH SHEET](#)

Flagstick creeping bentgrass (*Agrostis stolonifera*) was developed by screening for superior dollar spot resistance over multiple years and locations in both fairway and greens trials. It is a versatile variety with high density and rapid tillering to keep out *Poa annua*. The high performance reduces expenses on fairways, tees, or greens. 20 years of continual research ensures Flagstick will have superior performance wherever you plant it on your course. Flagstick has other important benefits including high density and fine leaf texture. Combined with resistance to many important diseases including anthracnose, red thread, brown patch, pink snow mold and take-all patch, your inputs with Flagstick will be reduced. Flagstick shows high seedling vigor and rapid establishment.
